# SAP Services Portfolio for Cloud Analytics

Deploy comprehensive data and analytics solutions to deliver data-driven innovation and intelligence across the enterprise, enabling enterprise AI and intelligent information management. Our services help our customers to understand, build and deploy solutions to ingest and merge data assets and transform them into critical business insights.

**Explore** — **Discover** — **Design** — **Deliver** — **Run & Scale**

---

### Strategic Advisory Service for Analytics

This service socializes Analytics into business operations and decision-making. By defining a governance model and analytics target architecture, this service formulates an analytics strategy that considers users, processes, and technology

---

### Enablement Service for SAP HANA Cloud
*Available on SAP Store*

This service helps our customers to prepare themselves for a successful deployment of SAP HANA Cloud.

---

### Enablement Service for SAP Datasphere
*Available on SAP Store*

This service helps our customers to prepare themselves for a successful deployment of SAP Datasphere.

---

### Enablement Service for SAP Analytics Cloud
*Available on SAP Store*

This service helps our customers to prepare themselves for a successful deployment of SAP Analytics Cloud.

---

### Quick-start implementation service for SAP HANA Cloud

This service provides a quick time-to-value for customers aiming to integrate SAP Cloud Platform, SAP HANA service into their landscape.

---

### Quick-start for SAP Datasphere

With this service, companies can quickly build a business data fabric that harmonizes data sources across the data landscape.

---

### Quick-start service for SAP Analytics Cloud
*Available on SAP Store*

The service achieves technical and functional readiness for SAP Analytics Cloud based on a defined, high value use case.

---

### Value Adoption service for SAP Analytics Cloud

With the value adoption service for SAP Analytics Cloud, customers can quickly and easily optimize the value of their SAP Analytics Cloud solution..

## Advisory

### Analytics and Data Management Vision

Review of a customer's existing BW system to determine how ready it is for a migration to Datasphere via BW Bridge. The Expert Evaluation includes a readout, summarized results shared in PPT format, detailed (object by object results) shared in Excel format, & recommendations on next steps

### Analytics Strategy Workshop (AST)

With the SAP Analytics Strategy Workshop, customers who may be considering or planning to renew their Analytical Frontend and Data Warehousing strategy, get a holistic overview of the topics that are key in the decision process for a new Analytics set up.

## Enablement

### Analytics Design Workshop

This service helps in refining the implementation aspects of Datasphere such as Spaces, Security, Models, and Reporting. The deliverable of the Service is a design proposal, high level project- and transition plan.

### Enablement Workshop (EWS)

Unlock the full potential of Datasphere by having a better understanding of new features, functionalities and innovations through workshop-style "show and tell" sessions.

## Quick-Start & Implementation

### Jump Start for Analytics & Data Management

This service helps with execution of a POC for Datasphere. The scope includes step a step guide to connect source systems, build models, and reports to consume the data.

### Design at Scale (DAS)

Support during build phase of the Datasphere project, providing expert advice & guidance related to key design decisions that need to be made while executing a Datasphere project.

### Safeguarding & Transition to Operations

Provides services and best-practice expertise to minimize the risks when implementing a SAP centric solution. It helps to ensure technical and functional integrity, optimal technical performance and hybrid operational readiness. Scope and service methodology can be adapted to be applicable for from simple solution implementation up to high-end / high performance solutions.
